

## CONNECTION TO A GRAVITY SEWER MAIN

Upon completion of the construction of the wastewater collection system, owners of existing structures will be given the opportunity to connect to the sewer main. The County will be responsible for constructing the gravity main within the street right-of-way. The County will construct a 4" sewer service from the sewer main to your property. The sewer service will terminate at the property line with a sewer cleanout with the top of the cleanout left above the ground. The actual service will be below ground and deep enough that a sewer service can be constructed from your house or building to the sewer service line.

### HOMEOWNER'S RESPONSIBILITY

The homeowner will be responsible for constructing a gravity sewer service line that runs from the line running to the septic tank to the cleanout at the property line constructed by the County. See the sketch below for more detailed information. The sewer service line may be installed by a licensed plumber or by the property owner. Under the Town of Calabash ordinance, the septic tank must be properly abandoned after connection to the sewer service.
